Multi-Mode and Multi-Functional IoT Educational Kit - IOT - IoT   Aug 2019 - May 2020

To be able to design a product using the current technology that will be beneficial to the lives of others is a huge contribution to the community. This project presents the design and implementation of a low cost but yet flexible and secure cell phone based home automation system. The design is based on a stand-alone Arduino BT board and the home appliances are connected to the input/output ports of this board via relays. The communication between the cell phone and the Arduino BT board is wireless.
